

**Amendments to the claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently amended): A mobile phone configured to be contactlessly activated by a signal transmitted from an activation device located outside said the mobile phone, the activation device comprising an integrated circuit (IC) card, wherein the activation device automatically detects a distance between the activation device and the mobile phone, and when the mobile phone is a specific distance away from the activation device, the activation device transmits the signal, the mobile phone comprising:

~~an integrated circuit (IC) card driver connected with a communication system for communicating with others; and~~

~~an access module connected with said IC card driver and said communication system for receiving the said signal transmitted from said the activation device to activate said mobile phone, thereby communicating with said others; and~~

an IC card driver for accessing, via the access module, a database recorded in the IC card of the activation device, the database being configured for use by the mobile phone to establish a communication with others via a communication system when the access module receives the signal transmitted from the activation device.

Claim 2 (Canceled)

3. (Currently amended): The mobile phone of claim 1 ~~according to claim 2,~~ wherein ~~said the~~ the IC card of the activation device records ~~an~~ identification data ~~for~~

being ~~configured to be~~ recognized by ~~said the~~ access module.

Claim 4 (Canceled)

5. (Currently amended): The mobile phone ~~according to claim 1, of claim 1~~ wherein when ~~said the~~ activation device is carried on a user and ~~said the~~ user is ~~approaching said a specific distance away from the mobile phone in said specific~~ distance, ~~said the~~ communication system is activated by ~~said the~~ activation device.

6. (Currently amended): The mobile phone ~~according to claim 5, of claim 1~~ wherein ~~said the~~ mobile phone is used in a vehicle.

7. (Currently amended): The mobile phone ~~according to claim 6, of claim 6~~ wherein ~~said the~~ mobile phone is combined with an audio device in ~~said the~~ vehicle.

Claim 8 (Canceled)

9. (New): Apparatus for establishing a communication comprising:

(a) a mobile phone comprising:

(a1) an access module; and

(a2) an integrated circuit (IC) card driver in communication with the access module; and

(b) an activation device located outside the mobile phone, the activation device comprising:

(b1) an IC card, wherein:

(i) the activation device automatically detects a distance between the activation device and the mobile phone;

(ii) the activation device transmits an activation signal which contactlessly activates the mobile phone when the mobile phone is a specific distance away from the activation device;

(iii) the access module receives the signal transmitted from the activation device; and

(iv) the IC card driver accesses, via the access module, a database recorded in the IC card of the activation device, the database being configured for use by the mobile phone to establish a communication with others via a communication system when the access module receives the signal transmitted from the activation device.

10. (New): The apparatus of claim 9 wherein the IC card of the activation device records identification data configured to be recognized by the access module.

11. (New): The apparatus of claim 9 wherein when the activation device is carried on a user and the user is a specific distance away from the mobile phone, the communication system is activated by the activation device.

12. (New): The apparatus of claim 9 wherein the mobile phone is used in a vehicle.

13. (New): The apparatus of claim 12 wherein the mobile phone is combined with an audio device in the vehicle.
